

ARSAM ARSAM

HTML5 Multiplayer Game Developer · Software Engineer

Germany · Open to Relocation

mughalarsam42@gmail.com · [LinkedIn](#) · [GitHub](#) · +49 1525 7434316

PROFILE

HTML5 Multiplayer Game Developer with 4 years of hands-on experience building real-time, scalable web-based multiplayer games for platforms serving thousands of concurrent players. Deep expertise in JavaScript/TypeScript, Node.js, WebSockets, and game engines, including Cocos Creator, Phaser, and Unity. Proven track record designing and shipping server-authoritative multiplayer systems — from architecture to production deployment — across Android, iOS, and browser platforms.

TECHNICAL SKILLS

Languages & Runtimes

JavaScript (ES6+), TypeScript, C#, Node.js

Multiplayer & Networking

Socket.io, WebSockets, real-time game-state synchronization, matchmaking systems, latency compensation, reconnection handling

Game Engines & Frameworks

Cocos Creator, Phaser 3, Unity (C#) — browser, Android & iOS targets

Web & Graphics

HTML5 Canvas, WebGL, Three.js, responsive UI/UX for cross-device gameplay

LiveOps & Production

Content updates, feature iteration, balancing, event deployment, live game maintenance

Backend & Architecture

Node.js game servers, bot/AI logic, asynchronous event-driven systems, MVC/MVVM, OOP design patterns

Platforms & Tools

PlayFab, Google Play Games, Git, Jira, Agile/Scrum, Chrome DevTools profiling

PROFESSIONAL EXPERIENCE

Software Engineer – Multiplayer Games | **Khaleef Technologies (Epic Games Lab)**

Dec 2021 – Aug 2025 · Lahore, Pakistan

Khaleef Technologies is an Epic Games-affiliated studio developing cross-platform HTML5 and mobile multiplayer titles distributed on major gaming platforms worldwide.

Key Contributions:

- Architected and shipped real-time HTML5 multiplayer games using JavaScript/TypeScript, Cocos Creator, Phaser, Node.js, and Socket.io — titles deployed to Gago, STC Play, GameNow, and Poki, reaching thousands of concurrent players.
- Built a full server-authoritative 4-player Jackaroo board game with AI-driven bots simulating human behaviour; implemented complex rule logic, turn management, reconnection, and edge-case handling entirely on the server.
- Engineered a 4-player UNO web game with scalable server logic, running parallel Android development in Unity (C#), demonstrating cross-platform proficiency on a single codebase.
- Led Unity-to-HTML5 conversion for multiple titles — re-implemented gameplay logic in TypeScript, optimised render loops, and resolved browser-specific performance bottlenecks to achieve smooth 60fps gameplay.

- Created physics-based multiplayer Carrom Kings: designed shot-trajectory simulation, real-time physics sync, and latency compensation algorithms to ensure fairness across varied network conditions.
- Integrated full asset pipelines (graphics, animations, audio) into Cocos Creator projects, collaborating closely with artists and designers to maintain visual polish and performance across all target devices.
- Profiled and optimised HTML5 games using Chrome DevTools, reducing rendering time and memory footprint significantly, resulting in improved frame rates on low-end mobile browsers.

Junior Front-End Developer | Techcon Solutions

Oct 2021 – Nov 2021 · Gujranwala, Pakistan

- Developed responsive web interfaces using JavaScript and React.
- Improved UI layout consistency and usability using modern CSS practices.

EDUCATION

M.Sc. in Computer Science | Technische Universität Ilmenau

Oct 2025 – Present · Ilmenau, Germany

B.Sc. in Computer Science (BSCS) | University of Engineering and Technology Lahore

Sep 2017 – Aug 2021 · Lahore, Pakistan

CERTIFICATIONS

- IELTS Academic – British Council (2024) | Overall Band: 7.5 (C1 – Professional Proficiency)

KEY HIGHLIGHTS

- 3.5+ years focused exclusively on HTML5 real-time multiplayer game development.
- Shipped multiple live multiplayer titles to major platforms (Poki, STC Play, GameNow, Gago), played by thousands of users.
- Strong full-stack multiplayer expertise: game client rendering + authoritative Node.js game server + networking layer.
- Cross-engine experience: Cocos Creator, Phaser 3, and Unity — able to pick up new engines quickly.
